IMPORTANT NOTICE

Please note the cooling fan fitted to this appliance is an integral part of its safety and functionality.
When the appliance is installed care must be taken that the cooling fans performance is not impeded by any objects coming into contact with it. (Installation pipes, leads etc)
Care must also be taken that there is sufficient air flow at the rear of the appliance for the cooling fan to run at its optimum efficiency. (Particularly Built In appliances)
See clearance dimensions in the installation section of the booklet.
During use the Appliance must never be disconnected from the Mains supply as this will seriously affect the safety and performance of the appliance, particularly in relation to surface temperatures becoming hot and gas operated parts not working efficiently.
The cooling fan is designed to run on after the control knob has been switched off to keep the front of the appliance and the controls cool until the appliance has naturally cooled itself.
Our Warranty

Should you need it . . . .

Inside the paperwork which has come with this appliance, there is a leaflet and card explaining the terms of our extended warranty and guarantee.
In order to apply for our five year guarantee, simply fill in the details on the card and post it off, this will register your appliance.
Should you wish to take out extended warranty, please fill in the details on the leaflet and post this off.

You can also register, and apply for extended warranty on line at:
www.stoves.co.uk/contact/warranty.

If your appliance is covered by the warranty and guarantee, you will not be billed for work undertaken should your appliance be faulty, terms and conditions do apply, so please read through the literature carefully.

Our Customer Care Centre can be called on:
0871 22 22 502

We aim to answer calls as quickly as possible, and in strict rotation as soon as one of our Customer Care team becomes free.

Please ensure that you have available your appliances model number and serial number, there is a space at the back of this book for recording that information.
Alternatively, you can visit the web site.

Outside the UK and Northern Ireland, please contact your local supplier.
If you smell gas:

*Do not* try to light any appliance. *Do not* touch any electrical switch.

**Call** the Gas Emergency Helpline at TRANSCO on: **0800 111999**
About Your Cooker

The illustrations below show the different cavity and hob layouts available within dual fuel ranges.

= Programmeable oven (see timer section)
Hob & Cooker Safety

✔ Always ensure that pan bases are dry, and flat before using them on the hob.
✔ Always position pans over the centre of the burner, and turn the handles to a safe position so they cannot be knocked or grabbed.
✔ Always use pans which are no smaller than 100mm (4”), or larger than 250mm (10”).
✔ Always take care when removing food from the oven as the area around the cavity may be hot.
✔ Always use oven gloves when handling any utensils which have been in the oven as they will be hot.
✔ Always make sure that the oven shelves are resting in the correct position in between two runners. Do not place the oven shelves on top of the highest runner, this will lead to spillage and injury if the baking tray, or dish falls.
♥ Never use double pans, rimbased pans, old or misshapen pans, or any pan which is not stable on a flat surface.
♥ Never leave cooking fat, or oil, unattended.
♥ Never use commercial simmering aids, or heat diffusers, as they create excessive heat and can damage the surface of the hob.
♥ Never use the hob for any other purpose than cooking food.
♥ Plastic cooking utensils can melt if they come into contact with a warm hob. Never leave them close to, or on top of, the hob.
♥ Never leave the burner alight without a pan covering it. This causes a fire hazard.
♥ Do not place items of the door while it is open.
♥ Do not wrap foil around the oven shelves, or allow it to block the flue.
♥ Do not drape tea towels near the oven while it is on, this will cause a fire hazard.
♥ Do not pull heavy items, such as turkeys, or large joints of meat, out from the oven on the shelf, as they may overbalance and fall.
♥ Do not use this appliance to heat anything other than food items, and do not use it for heating the room.

⚠️ WARNING: Parts of the appliance may become hot while in use, always make sure that children are supervised when they are near to the appliance.

Always make sure that the burner caps, rings and pansupports are correctly placed. This will prevent pans becoming unstable while in use, and ensure an uninterrupted gas flow.

ℹ️ Call Customer Care for a service engineers visit if:
• You find over a period of time that the gas oven becomes hotter at a particular temperature - the thermostat may need replacing.
Chip Pan Fires

What causes a chip pan fire?

- Chip pan fires start when oil of fat overheats and catches fire, or when oil or fat spills on to the cooker because the pan has been filled too high.
- They can also start when wet chips are put into hot oil, making it bubble up and over flow.

Preventing a chip pan fire

- Never fill the pan more than a third full with oil of fat.
- Never leave the pan alone with the heat on - even for a few seconds.
- Dry chips before putting them in the pan.
- Never put chips in the pan if the oil has started smoking. Turn off the heat and leave the oil to cool down, or else it could catch fire.

In the event of a chip pan fire

- If your chip pan does catch fire - don’t panic, and don’t move the pan. Serious burns are often caused by picking up the pan and running outside with it.
- If it is safe to do so, and you don’t have to reach across the pan, turn off the heat.
- Never throw water, or use a fire extinguisher.
- If you can, drape a damp cloth or towel over the pan to smother the flames.
- Leave the pan to cool down for at least half an hour.
- If you can’t control the fire yourself, close the door, get out and tell everybody else to get out.
- Call the fire brigade. Don’t go back inside whatever the reason.
Using The Programmer/Clock

Through your programmer you will be able to set the time of day, set the minute minder, and use the semi and fully automatic cooking functions. The programmer is vital to the working of your appliance, and reading this section will make sure that you get the most out of your ovens.

The programmer buttons
There are three buttons on this type of timer. The table below shows you what their symbols look like, depending on the model type, and what they do.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Symbol</th>
<th>What is it?</th>
</tr>
</thead>
<tbody>
<tr>
<td>¬</td>
<td>Down / Minus</td>
<td></td>
</tr>
<tr>
<td>Used to decrease cook / end time, remove minutes from the minute minder and adjust the time of day. Also for listening to and setting the alarm tone.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>☩</td>
<td>Up / Plus</td>
<td></td>
</tr>
<tr>
<td>Used to increase cook / end time, add minutes to the minute minder and adjust the time of day.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ø</td>
<td>Function button</td>
<td></td>
</tr>
<tr>
<td>Used to select the functions available on this timer.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Press once for: Minute Minder. Press twice for: Cook time Press three times for: End time. How to use these functions is explained later on in this section.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Setting the time of day
◆ Press the Plus and Minus buttons together for a few seconds and release.
◆ Set the time of day using the Plus and Minus buttons. Press once for single digit increase, press and hold for rapid increase.
◆ Once the time of day has been set wait approx 10 seconds until the ‘.’ stops flashing.
◆ Use the appliance as normal.

Setting an alarm tone
There are three tones to choose from.
● Press and release the minus button.
● Once the minus button is released, the tone is selected.
Using The Programmer/Clock

**Setting the minute minder**
- To set the Minute Minder, press the Function button once. The bell symbol will appear and start flashing. The flashing only lasts for 5 seconds so the time must be set within this time frame.
- Use the Plus and Minus button to set the length of time required. Once this has been done, the Minute Minder is set.
- When the desired length of time has counted down the alarm will sound. To cancel the tone, press any of the buttons.
- To cancel the Minute Minder at any time, press the Plus and Minus buttons together.

**Semi - Automatic Cooking**

**The Duration method**
Switch off after a set time period
- Press the Function button twice, which will skip past the Minute Minder.
- The display will flash the word ‘dur’, and the ‘A’ will flash on the left hand side of the display.
- Use the Plus and Minus buttons to set the length of time you want to cook for. This must be done within 5 seconds or the time of day will show again.
- Once this is done the oven will automatically switch off once the time has elapsed, and the alarm will sound. To switch off the alarm, press any button.
- To view any remaining time press the function button twice.

**The End Time method**
Switch off at a set end time
- Press the Function button three times, which will skip past the Minute Minder and the Duration programmer.
- The display will flash the word ‘End’ and the ‘A’ will flash on the left hand side of the display.
- Use the Plus and Minus buttons to select the time the oven is required to turn off.
- Once this is done the oven will turn itself off at the time you have selected. To switch off the alarm, press any button.
Setting the Programmer

Fully Automatic Cooking
Switch on and off automatically
This requires both the duration and the end time to be entered. The timer will work out the start time and begin cooking.
- Press the Function button twice, which will skip past the Minute Minder.
- The display will flash the word 'dur', and the 'A' will flash on the left hand side of the display.
- Use the Plus and Minus buttons to set the length of time you want to cook for. This must be done within 5 seconds or the time of day will show again.
- Press the Function button three times, which will skip past the Minute Minder and the Duration programmer.
- The display will flash the word 'End' and the 'A' will flash on the left hand side of the display.
- Use the Plus and Minus buttons to select the time the oven is required to turn off.
- Once this is done the oven will turn itself off at the time you have selected. To switch off the alarm, press any button.
- Set the temperature of the oven and place the food inside.
- The timer will calculate the appropriate start time.

When using the Programmer:

Do:
- Familiarise yourself with the use of the programmer.
- Select foods which are as fresh and as cold as possible preferably straight from the refrigerator.
- Choose foods which are suitable for cooking from a cold start, as some dishes will be affected by being left uncooked, at room temperature.
- Make sure that meat, poultry and uncooked food are thoroughly thawed before placing them in the oven.
- Cover dishes with lids or foil.
- Try to keep the end time as close to your return as possible.

Do not:
- Place warm food in the oven for delayed cooking foods must be thoroughly cooled before placing in the oven, the oven must also be cool before you start.
- Cook dishes containing left over cooked meat or poultry, or pastry dishes with wet fillings, they are not suitable!
- Over-fill dishes containing liquids.

The automatic cooking symbol will appear to show that the oven is no longer in manual mode but in automatic mode.

Important: Once the oven has switched itself off please make sure you turn to oven controls to the 'off' position and set the oven to manual by pressing the Cook Time and Ready Time buttons together.

Important: Remove food as soon as it is cooked.
Using Your Gas Hob

Hob Ignition

Models without thermocouples:
- To turn on, place your pan onto the pansupports above the burner you wish to use.
- Push in and turn the selected control knob anticlockwise, to the full on symbol.
- If your hob has an ignition button or switch on the fascia, press it in until your burner lights.
- If your hob has automatic ignition it will spark next to the burner when you push in the control knob.
- To simmer, turn the control knob to the small flame symbol. This will ensure that the flame is just large enough to gently heat the contents of the pan.
- To turn off, turn the control knob clockwise to the ‘off’ position.
- Always make sure that your pans are place correctly on the burners as shown, and do not allow the flame to extend over the base of the pan.

Models with thermocouples:
Igniton as above, but:
- Hold the control knob in for 15 seconds. Do not hold the control knob in for any longer than 15 seconds. If the burner fails to light within this time, release the control knob and wait one minute before attempting to re-ignite.

Energy Saving
- Position pans centrally over the elements.
- Only heat the amount of liquid you need.
- Once liquids have been brought to the boil, reduce the heat setting to a simmer.
- Consider using a pressure cooker if possible.
- Vegetables in small pieces will cook quicker.
- Use a pan which is a close match to your element size.
- Smaller elements are ideal for simmering and stewing in smaller pans, while the larger elements are ideal for frying and boiling.

How can I tell if my hob has thermocouples?

Picture A below: shows a burner without thermocouples.

Picture B below: shows a burner with thermocouples.

In the event of a power failure, or the ignition not working:
Push in and turn the control knob to start the gas, then hold a lighted match or taper to the burner until it lights.

Use flat based pans which are the correct size for your burners and suitable for your hob type. We recommend the following sizes:
- 100mm or 4” min.
- 250mm or 10” max.
Smaller or larger pan sizes may lead to slower cooking times.
Using Your Griddle

- Only use the griddle which has been approved for use on this appliance. Do not use any other griddle, as this may be hazardous.
- Please read these instructions thoroughly before using the griddle for the first time.

Before using the griddle for the first time
- Wash the griddle thoroughly in hot soapy water. (see “Cleaning” section).
- Season sparingly with a minimum amount of cooking oil.
- Heat the griddle on full rate for 3 minutes. The griddle plate is now ready for use.

Using the griddle
- The griddle should only be positioned front-to-back over the burners indicated by the griddle symbol on the fascia panel.
- Do not use the griddle over the large burners.
- Place the griddle carefully on the pan support over the burners, using the locating feet on the underside of the griddle. Take care to avoid damage to the surface of the pan supports.
- Before cooking, preheat the griddle for 3 minutes on full rate, which is indicated on the control knobs by a large flame symbol.
- After preheating, turn the control knobs to the small flame symbol.
- The griddle is now ready for cooking.
- Do not use metal implements, as they may damage the non-stick surface.
Richmond models

Before you start grilling. . . .
Before you use the grill, make sure you have placed the grill shelf in the position you need as once the grill is on you may injure yourself if you try to move the shelf.

- **Do not** close the door while the grill is in use.
- Turn the selector control knob to the grilling position then select the heat setting you require.
- To switch off, return the control knob to the ‘off’ position.
- The cooling fan will come on during use, and may continue to run for some time afterwards.
- To adjust your results, you can turn the grid over, or remove it altogether.

If your grill is a dual grill:
- The dual grill uses all of the top element and is ideal for grilling large quantities of food.
- The single grill uses part of the element only, and is better suited to grill smaller amounts of food.

**The grill pan**
This appliance comes with a grill pan, grill pan handle and a grid.
The handle of the grill pan is detachable to allow you to remove it while the pan is in use, this stops it from getting hot.

**To attach the handle:**
Place the handle over the narrow edge of the grill pan and slide to the centre as shown in the diagrams.

**Shelf & Grid adjustments**
Speed of grilling can be adjusted by changing the shelf position or the turning the grill pan grid.
- **High:** For thin foods and toasting.
- **Low:** For thicker meat pieces.

**Aluminium Foil**
Never cover the grill pan or grill trivet with foil, or allow fat to build up in the grill pan, as this creates a fire hazard.

As with any cooking guide, all times are approximate and can be adjusted to suit personal taste.
Using Your Conventional Top Oven

Richmond models

Switching on the oven

- Turn the control knob towards the conventional oven setting.
- Select the temperature you require.
- The thermostat indicator will come on to show that the oven is heating, and once the temperature is achieved, it will go out.
- Throughout the duration of your cooking the neon may come on and off, this shows that the thermostat is maintaining the chosen heat setting.
- To switch off the top oven, simply turn the control knob back to the ‘●’ position.
- The cooling fan will come on during use, and may continue to run for some time afterwards.

Important: Never place food, or dishes on the base of the main oven - the element is here and it will cause overheating.

Note: This is a secondary oven - ideal for smaller dishes.

</tr>
</tbody>
</table>

*As with any cooking guide, all times are approximate and can be adjusted to suit personal taste.*

*Because the top oven is smaller - you might need to reduce times/temperatures in recipes.*

*All times given in the guide are based on a pre-heated oven.*
Using Your Multifunction Oven

The multifunction oven may be controlled by the programmer (see The Programmer/Clock for details).
The programmer, if fitted must be set to manual before it can be used, or programmed.

Switching on the multifunction oven

- Use the function control knob to select the function you wish to use - see the functions table for details.
  Note: You can change function during cooking if you wish, as long as the oven is in manual mode.
- Turn the temperature control knob to the temperature you wish to use.
- The thermostat indicator will come on to show that the oven is heating, and once the temperature is achieved, it will go out.
- To switch off the oven, simply turn the control knob back to the ‘ ‘ position.
- The cooling fan may come on during use, and may continue to run for some time afterwards.

Important: Never place food, or dishes on the base of the main oven, the element is here and it will cause over heating.
Using Your Fanned Oven (if fitted)

Switching on the fanned oven

- Use the fanned oven control to turn your oven on, and select your temperature.
- The thermostat indicator will come on to show that the oven is heating, and once the temperature is achieved, it will go out.
- To switch off the oven, simply turn the control knob back to the ‘’ position.
- The cooling fan may come on during use, and may continue to run for some time afterwards.

Important: Never place food, or dishes on the base of the main oven, the element is here and it will cause over heating.
# Oven & Grill Functions

The chart below details all of the functions which are available. Your oven may not have all of the functions shown here.

<table>
<thead>
<tr>
<th>Main Oven Function</th>
<th>Recommended Uses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Base Heat Only</td>
<td>Used to finish off the bases of food following cooking using the conventional or fanned modes. The base heat can be used to provide additional browning for pizzas, pies and quiche. Use this function towards the end of cooking.</td>
</tr>
<tr>
<td>Top Heat Only</td>
<td>The heat is ideal from browning off the tops of food as it is not as fierce as the grill following conventional or fanned cooking. Provides additional browning for dishes like Lasagna or Cauliflower cheese. Use this function towards the end of cooking.</td>
</tr>
<tr>
<td>Conventional Oven</td>
<td>This function is ideal for traditional roasting. The meat is placed in the middle of the oven, roast potatoes towards the top.</td>
</tr>
<tr>
<td>Intensive Bake</td>
<td>Suitable for food with a high moisture content, such as quiche, bread and cheesecake. It also eliminates the need for baking pastry blind.</td>
</tr>
<tr>
<td>Fanned Grill</td>
<td>The fan allows the heat to circulate around the food. Ideal for thinner foods such as bacon, fish and gammon steaks. Foods do not require turning. Use with the oven door closed.</td>
</tr>
<tr>
<td>Fanned Oven</td>
<td>The even temperature in the oven makes this function suitable for batch baking, or batch cooking foods.</td>
</tr>
<tr>
<td>Defrost</td>
<td>To defrost foods, such as cream cakes/gateaux, use with the oven door closed. For cooling dishes prior to refrigeration, leave the door open.</td>
</tr>
<tr>
<td>Dual Grill</td>
<td>This function cooks food from the top and is ideal for a range of food from toast to steaks. As the whole grill is working, you can cook larger quantities of food.</td>
</tr>
<tr>
<td>Single Grill</td>
<td>For smaller quantities of food, but is still ideal for anything from toast to steaks.</td>
</tr>
<tr>
<td>Base Heat with Fan</td>
<td>Used to cook open pies (such as mince pies) the base element ensures that the base is cooked while the fan allows the air to circulate around the filling - without being too intensive.</td>
</tr>
<tr>
<td>Lights only</td>
<td>Use when the oven is switched off and cold to aid cleaning the oven cavity.</td>
</tr>
</tbody>
</table>
Before you start grilling . . .
Before you use the grill, make sure you have placed the grill shelf in the position you need as once the grill is on you may injure yourself if you try to move the shelf.

Richmond models

- This grill function must be used with the door closed.
- Turn the selector control knob to the grill setting you require (conventional or fanned).
- Turn the temperature selector to heat setting you require in a similar way to the selecting the oven temperature.
- **Note:** Do not set the temperature any higher than 220 °C.
- To switch off, return the control knobs to the ‘off’ position.
- To adjust your results, you can turn the grid over, or remove it altogether.

Fanned and Conventional grilling?

- The conventional grill uses half of the element and is ideal for grilling all kinds of food.
- The fanned grill uses half of the element and the fan, and this reduces the need to turn thinner foods such as bacon or fish.

**Warning:** Accessible parts may become hot when the grill is in use. Children should be kept away.

**Types of grill**

- **Fixed rate grill:** has a full ‘on’ setting and ‘off’.
- **Variable rate grill:** has adjustable heat settings 1 (low) to 8 (high) or 5 (high) - depending on the model.
- **Single grill** has one grill element.
- **Dual grill** has two grill elements which can be used together, or as a

For best results:

- Pre-heat the grill for about 3 minutes.
Using Your Multifunction Oven Grill

Before you start grilling...

Before you use the grill, make sure you have placed the grill shelf in the position you need as once the grill is on you may injure yourself if you try to move the shelf.

Sterling / Gourmet

- This grill function can be used with the door open, or closed.
- Turn the selector control knob to the grill setting.
- Turn the grill control knob to either the dual or single grill setting. Then select the heat setting.
- To switch off, return the control knobs to the ‘off’ position.
- The cooling fan will come on during use, and may continue to run for some time afterwards.
- To adjust your results, you can turn the grid over, or remove it altogether.

If your grill is a dual grill:

- The dual grill uses all of the top element and is ideal for grilling large quantities of food.
- The single grill uses part of the element only, and is better suited to grill smaller amounts of food.

The grill neon

When grilling with the door closed, the neon will cycle on and off as the temperature is maintained inside the cavity. If the door is open, it will not cycle on and off.

Warning: Accessible parts may become hot when the grill is in use. Children should be kept away.

Types of grill

- Fixed rate grill: has a full 'on' setting and 'off'.
- Variable rate grill: has adjustable heat settings 1 (low) to 8 (high) or 5 (high) - depending on the model.
- Single grill has one grill element.
- Dual grill has two grill elements which can be used together, or as a

For best results:

Pre-heat the grill for about 3 minutes.
Some adjustment will have to be made to conventional cooking temperatures.

The table below shows conventional cooking temperatures, fanned temperatures and gas marks. For optimum results using the fanned oven setting, conventional temperatures need to be converted to the fanned oven temperatures.

For example and item which would cook at 180°C will now cook at the fanned oven temperature of 160°C.

This is a high efficiency oven, you may notice an emission of steam when the door is opened.

When cooking chilled or frozen foods, use the recommended cooking times and temperature on the packaging. Always make sure the food is piping hot throughout before serving.

There are no zones of heat, and no flavour transfer when using a fanned oven - allowing you to cook a greater variety of foods together.

If you are cooking on more than one shelf, you may need to slightly increase the cooking time.

Always make sure that there is enough space between dishes, to allow food to rise, and to air to circulate.

## Cooking Guide

### Pre-heating
To get the best results from your oven, we recommend pre-heating for around 5 to 15 minutes before placing your dishes in. This is especially important for items which are chilled, frozen, batter based, yeast based or whisked sponges.

If you are using a fanned function, you should still pre-heat but for a shorter time.

The items in the cooking guide below are based on a pre-heated oven, but can be adjusted to take into account personal taste.

### Oven and bakeware
Always use high quality trays and tins for cooking. Poor quality tins and trays can warp in the oven producing uneven results.

Never use dishes which are cracked, damaged or not oven proof as heating may lead to shattering inside the oven.

</tbody>
</table>
Roasting times depend on the weight, shape and texture of the meat and personal preference. In order to calculate the roasting time, weigh the meat or poultry, including the stuffing, and follow the times given below.

- Frozen meat must be thoroughly thawed before cooking. For large joints, it is advisable to thaw overnight.
- Frozen poultry must be thoroughly thawed before cooking. The time required depends on the size of the bird - eg: a large turkey may take up to 48 hours to thaw.
- When cooking stuffed meat or poultry, calculate the cooking time from the total weight of the meat plus the stuffing.
- Cooking joints in foil, covered roasters, lidded casseroles, or roasting bags will help to reduce meat shrinkage, give a more moist result and may reduce fat splashing. However, a slightly longer cooking times will be required, add 5 - 10 minutes per 450g (1lb) to the calculated cooking time. When using roasting bags do not exceed the temperatures recommended by the manufacturer, and do not allow the roasting bag to touch the sides or top of the oven.
- Use of a trivet with the roasting tin will reduce fat splashing during open roasting, and will help to keep the oven interior clean.
- The use of a roasting tin larger then that supplied is not advised, as this may impair performance and lead to extended cooking times.

Meat joints (including chicken) should be roasted at 180 - 200°C Conventional/ 160 - 180°C Fanned for 20 - 30 mins per 450g/1lb, plus 20 minutes on shelf position 2.
Roasting turkey perfectly involves cooking two different types of meat - the delicate light breast meat, which must not be allowed to dry out, and the darker leg meat, which takes longer to cook.

- The turkey must be roasted long enough for the legs to cook, so frequent basting is necessary. The breast meat can be covered once browned.

- Turkey should be roasted at **180 - 190°C Conventional/ 160°C Fanned** for 20 mins per 1lb, plus 20 minutes.

- The turkey can be open roasted, breast side down, for half of the cook time, and then turned over for the remainder of the cooking time.

- If the turkey is stuffed, **add 5 minutes per 1lb to the cooking time.**

- If roasting turkey covered with foil, **add 5 minutes per 1lb to the cooking time.**

- To test if the turkey is cooked, push a fine skewer into the thickest part of the thigh. If the juices run clear, the turkey is cooked. If the juices are still pink, the turkey will need longer cooking. Always make sure that the turkey is cooked properly before serving.

Turkey Roasting times.

Most Turkeys are measured by the kilogram. Timing should be calculated in either of these ways:

- 40 minutes per 1kg plus 10 minutes per 1/4 kg.

  or

- 20 minutes per 1lb, plus 20 minutes.

The maximum size Turkey for this appliance is: 20lbs approximately 9kgs. Please do not attempt to roast a Turkey larger than this, as the results cannot be guaranteed.
# General Baking Guide

## Trouble-shooting - Fruit Cakes

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>POSSIBLE CAUSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fruit sinking to the bottom</td>
<td>Low oven temperature which may cause the cake to take longer to set, allowing the fruit to sink. Or, too much liquid, or raising agent. The fruit may not have been properly washed and dried.</td>
</tr>
<tr>
<td>Cake sinking / dipping in the centre</td>
<td>Too much raising agent in the mixture. Too hot, or too cool an oven. Or, not enough liquid or insufficient creaming.</td>

<td>Oven temperature too low. Baked too low in the oven</td>
</tr>
<tr>
<td>Overflowing tin</td>
<td>Tin too small for the amount of mixture</td>
</tr>
</tbody>
</table>
‘Cooling & Defrosting’ Function

- To **cool** foods quickly straight after cooking, but before refrigerating or freezing, turn the oven control to the defrost position, and **open** the door.

- To **defrost** frozen foods, turn the oven control to the defrost position, place the food in the centre of the oven and **close** the door.

**Defrosting times**

- Small or thin pieces of frozen fish or meat - eg; fish fillets, prawns, and mince will take approximately 1 - 2 hours. Placing the food in a single layer will reduce the thawing time.
- A medium sized casserole or stew will take around 3 - 4 hours.
- A 1 1/2kg / 3lb oven ready chicken will take around 5 hours, remove the giblets as soon as possible.
- Always check foods are thoroughly defrosted before cooking.

**Be safe**

- **Do not** defrost stuffed poultry using this method.
- **Do not** defrost larger joints of meat and poultry over 2kg / 4lb using this method.
- **Never** place uncooked food for defrosting next to cooked food which is to be cooled, as this can lead to cross contamination.
- Defrosting meat, poultry and fish speeded up using this method, but make sure they are completely thawed before cooking thoroughly.
- Place meat and poultry on a trivet in a meat tin, to catch the juices from the defrosting process.
Using Your Slow Cook Oven (if fitted)

Introduction
One of your oven compartments is an electric oven which provides a gentle heat suitable for slow cooking or keeping food warm. The slow cook element is positioned in the base of the lower compartment - always make sure that the cooking pot is placed centrally on the base of this compartment.

- Do not use the compartment to store food or canned items.

Cooking times
The cooking time varies according to the type of food being cooked, and experience will show how long foods should be cooked for, according to personal taste and preference. In general foods should be cooked for at least 5 hours, and may be left up to 8 - 10 hours without spoiling if covered. Foods cooked using the slow cook oven will take about three times longer than they would in a conventional oven.

Utensils
Any oven proof utensils may be used for slow cooking - provided they have a close fitted lid.
To rectify a badly fitting lid a piece of cooking foil may be placed over the dish, under the lid.
The most useful utensils for slow cooking are the flame proof type which can be used over direct heat and for oven cooking, and are sufficiently attractive to use as serving dishes.

Benefits of Slow Cooking
Slow cooking has always been the best way to prepare hot meals with the minimum of preparation and maximum time away from the kitchen.
The advantages of slow cooking are as follows:
- Food can be left to cook unattended for several hours and will keep hot for several hours if left covered.
- Inexpensive cuts of meat become deliciously tender when slow cooked. There is also a reduction in meat shrinkage.
- Dishes such as soups, vegetables, puddings savoury dishes and preserves are also suitable for slow cooking.
- There is no topping up of steamers, steam filled kitchens or constant checking to do.
Using Your Slow Cook Oven (if fitted)

Keeping food warm
Turn the oven control knob to the on position, and place the food in the oven. If food is to be kept moist then it is important to cover the dish or plate to prevent food from drying out. This can be done using aluminium foil if the dish does not have a lid.

- **Do not** use cling film to cover food.
- Some foods are best left uncovered if you wish to keep the food dry and crisp.
- Do not add gravy to plated meals until serving.
- Carved meat should be placed on one plate and covered, adding just one tablespoon of gravy to keep it moist.
- When keeping plated meals warm it is recommended that the food is placed on hot rather than cold plates.

Slow Cooking
Turn on the slow cook oven and place the prepared cooking pot centrally on the base of the oven. Follow the guides lines for the best results.

- The maximum capacity of ovenproof dishes should be no more than 2.5 litres (4.5 pints). Please note: The more you fill the dish/pot the longer it will take to cook.
- All meat and poultry recipes need a minimum of 5 hours to cook.
- Make sure all frozen ingredients are well thawed out.
- Cut root vegetables into smaller pieces as they take longer than meat to cook. If possible they should be sauteed for 2 - 3 minutes before slow cooking.
- Ensure that root vegetables are always at the bottom of the pan immersed in the cooking liquid.
- A meat thermometer should be used when cooking pork joints and poultry. The internal temperature of the food should reach 88°C.
- Stuffed meat or stuffed poultry should not be slow cooked. Cook any stuffing separately.
- Cover casseroles with a lid, or foil to prevent loss of moisture.
- Adjust seasoning and thickening at the end of cooking time.
- Opening the door during cooking, leads to heat loss, and will lead to increased cooking times.
Plate Rack (if fitted)

To fit the plate rack:

- Pull the shelf out of the cavity.
- Tilt the plate warmer towards you and make sure that it hooks underneath the shelf bars at the front.
- Drop the plate warmer carefully into position.

The plate warmer is now secure and you can place your plates into it.

**Always** make sure that you use oven gloves if you are putting the plate warmer into a hot, or recently used oven to prevent burns.

**Always** make sure that your plates are suitable for warming - some plates may shatter or crack when exposed to heat.

We recommend that you heat the oven to 70°C, or below, if you are warming plates.
Cleaning your Gas Hob

Sometimes when a hob is not working well, it is because it needs cleaning.

**Enamel parts**
- Use a mild cream cleaner for example ‘Cif’. Stubborn marks can be removed with a soap filled pad.

**Stainless steel surfaces**
- Only use a clean cloth wrung out with warm, soapy water and dried off with a soft cloth. For stubborn marks use a specialist stainless steel cleaner.
- **Do not** use steam cleaners.
- Sharp implements and objects can mark the surface of stainless steel, however they do become less noticeable in time.

**Cast iron parts**
- Ensure the parts have fully cooled and scrape off any stubborn marks, and bits of food with a plastic, or wooden cooking implement. Rinse in warm soapy water and dry with a tea towel.
- **Do not** clean in a dishwasher.
- If you notice any rusting on your griddle, or pansupports, simply clean in warm soapy water, then re-season.

**Burner caps and heads**
The slots in the burner head where the flames burn should be cleared of deposits.
- Clean with a nylon brush, rinse and then dry thoroughly. There may be brownish coloured markings on your burners, these are carbon deposits or fat stains and can be removed using a soap filled pad.
- **Do not** put burners in the dishwasher or soak them. Using dishwasher powders, washing up liquids and caustic pastes can damage the burners.
- Burner caps and heads must be repositioned correctly so that they sit squarely on to the hob as shown on the the left.
- This is particularly important with stainless steel models as failure to reposition the caps correctly may result in discolouration of the stainless steel around the burners.

**Painted & Plastic parts**
- Only use a clean cloth wrung out in hot soapy water.
Cleaning your Cavities

Cleaning the oven cavities
- Some foods can cause fat to spit, especially if you have open roasted, this leaves the inside of the cavity greasy.
- It is important to clean the oven cavity as a build up of fat can damage the appliance and may invalidate your guarantee.

Chrome plated parts.
- Use a moist soap filled pad, shelves can be placed in a dishwasher.
- Shelf runners can be removed to enable you to clean then thoroughly. Make sure they are cool to touch and then grasp the runners and slide out of their hanging holes.

Pristine enamel surfaces
- The enamel can be cleaned by wiping the surfaces with a clean cloth which has been wrung out in hot, soapy water.
- If larger splashes of fat do not readily disappear, you can use a mild cream cleaner to remove them. More stubborn marks can be removed using a soap filled pad.
- Rinse well, and allow to dry before use.

Vitreous enamel surfaces
- The enamel can be cleaned by wiping the surfaces with a clean cloth which has been wrung out in hot, soapy water.
- Stubborn marks can be cleaned using a moistened soap filled pad, or a mild cream cleaner.
- Rinse well, and allow to dry before use.

Always allow your appliance to cool down, and switch off the electricity before you clean any part of it.

Don't use: Caustic or abrasive cleaners, bleaches, coarse wire wool or hard implements, these will damage your appliance.

Using a trivet while roasting meat may help to reduce fat splashes.
Telescopic Shelving System (if fitted)

- In addition to the traditional shelving fitted into your appliance, the telescopic shelving system is fitted in the most commonly used location in your cavity.
- The shelves with the telescopic system are easier to pull out than traditional shelving, which means the oven door stays open for a shorter period of time. The smooth action also reduces the likelihood of fat, or food, spillage, and gives you extra security.
- You do not have to use the telescopic shelves all of the time, you can place the shelves in the traditional positions if you would like more choice.
- The telescopic shelves remove easily from the runner for re-positioning or cleaning, but we recommend that you reposition your shelving before cooking, and remove the shelving for cleaning when the shelves are cold to prevent burning yourself.

To remove the telescopic shelves
- Make sure the shelf is cool enough to touch.
- Push the oven shelf back into the cavity, until it hits the stop position.
- Grasp the shelf bars in the centre, and lift the back of the shelf clear of the stop position.
- You can then lift the front of the shelf clear of the retaining tabs.

To replace the telescopic shelves
- Make sure the oven runners are pushed all the way back into the cavity.
- Tilt the shelf and make sure the front of the shelf is against the stop position.
- Carefully place the shelf back onto the runner and snap in place firmly.
- Make sure the back of the shelf is inside the retaining tabs and slide it in and out of the oven to make sure it works correctly.

Standard shelves
- Standard shelves are removed by pulling them straight out towards you and are replaced by sliding them straight into the oven to the back of the cavity.
- These shelves can be cleaned in the dishwasher.
Cleaning your Appliance

Painted & Plastic parts
- Only use a clean cloth wrung out in hot soapy water.
- Do not use abrasive cleaners, such as “Cif”, wire or nylon cleaning pads on these parts.

Stainless steel & Aluminium surfaces
- Only use a clean cloth wrung out in hot soapy water, and dry with a soft cloth.
- Stubborn marks can be removed using a stainless steel cleaner. Supplies can be purchased from the Customer Care Centre.
- Sharp objects can mark the surface of stainless steel, but will become less noticeable with time.
- Wipe any spillage immediately, taking care to avoid burning your hands.
- Some foods are corrosive eg; vinegar, fruit juices and especially salt they can mark or damage the metal if they are left on the surface.

Enamel surfaces & parts
- Clean with warm, soapy water and a clean cloth.
- Dry with a soft clean towel or cloth.
- Do not use steam cleaners.

Glass parts
- Only use a clean cloth wrung out in hot soapy water, or a specialist glass cleaner.
- Rinse away any excess cleaner and dry with a soft cloth.
- Do not use abrasives or polishes as they will scratch and damage the glass.
- The inner door glass panel can be removed for cleaning but it must be replaced the right way up. If there is any writing on the glass, you must be able to read it clearly when the cavity doors are open.
- Always make sure that the glass is pushed fully into the Stop position.
- To remove the glass panel, open the door wide, hold the top and bottom edges and slide out.
- Warning: Do not operate the appliance without the glass panel correctly fitted.

Always allow your appliance to cool down, and switch off the electricity before you clean any part of it.

Take extra care when cleaning over symbols on fascia panels, excessive cleaning can lead to the symbols fading.

Baby oil can be used to restore stainless steel finishes - but only use a few drops. Don't use cooking oils as they can contain salts which will damage the metal.

Don't use: undiluted bleaches, products containing chlorides or abrasive cleaners on aluminium or stainless steel, they can damage the appliance.

Glass door panels
For your safety, glass door panels are made of toughened glass. This ensures that, in the unlikely event that a panel breaks, it does so into small fragments to minimise the risk of injury.

Please take care when handling, using or cleaning all glass panels, as any damage to the surfaces or edges may result in the glass breaking without warning or apparent cause at a later date.

Should any glass panel be damaged, we strongly recommend that it is replaced immediately.

### Before you call.

<table>
<thead>
<tr>
<th>Problem?</th>
<th>Advice</th>
</tr>
</thead>
</table>
| **The ignition won’t work.** (Gas and dual fuel models)                | • Check there is a spark when the ignition button is depressed. If there is no spark, check the electricity supply is switched on at the socket.  
  • Check that the gas supply is switched on.  
  • Try another appliance in the socket, if that works replace the 3 amp fuse in the cooker plug. |
| **There’s condensation on the doors.**                                 | Condensation is caused by hot, moist air meeting a cooler surface (i.e. the oven door). You cannot always prevent it, but you can minimise it when it happens by doing the following:  
  • Pre-heat the oven at a high temperature before putting food in the oven, and cover the food you are cooking wherever possible.  
  • Whenever you can, cook wet foods at higher temperatures.  
  • Don’t leave food in the oven to cool down.  
  Automatic cooking will normally produce condensation when the oven is cooling down with food inside. |
| **There’s been a power failure and the oven won’t work.** (models with clocks and automatic programmers) | • Switch off the electricity supply.  
  • When the power returns - re-set the programmer/Clock to the correct time of day.  
  This will allow you to use your appliance. |
# Changing Light Bulbs

**Warning:** There is a risk of electric shock, so always make sure you have turned off and unplugged your appliance.

Not all appliances have the same number and type of bulbs. Before replacing your bulb, open the top/main oven door and see which type you have. Then use the table to help you change your bulb correctly.

Please remember that bulbs are not covered by your warranty.

Bulbs can be purchased from hardware stores (always take the old bulb with you).

<table>

There is no need to remove the oven back on the 900DF model.
Installing Your Cooker

Always make sure that your appliance is fitted correctly, by a competent installer. This is a Class 1 appliance regarding installation requirements.

**Before you start**

Always make sure that you have carefully read through the installation pages of this book - careful planning at the beginning will ensure a quick and easy installation.

- Take care when moving this appliance, it may be heavier than it looks! If you need to lift the appliance, make sure you use an appropriate lifting method.

- Soft, or uneven flooring may be damaged unless the appliance is moved with care.

- Do not attempt to move the cooker by pulling on the handles or doors, we recommend that you open the door and grasp the frame of the cooker. Please wear protective gloves for this, and make sure the door cannot trap your fingers.

Please make sure that you have enough space for your appliance. Clearances and more installation details are given on the following page.
Installing Your Cooker

Clearances

This cooker may be fitted flush to the base units of your kitchen.

- No shelf, overhang, cupboard, or cooker hood should be less than 650mm above the hob top, but please check this with the hood manufacturers instructions.

- If your appliance has a side opening door, we recommend a side clearance of 60mm to allow the oven door to fully open.

- The cooker must have a side clearance above hob level of 90mm up to a height of 400mm.

- The important dimensions are those around the appliance.
Installing Your Cooker

The information below is crucial to installing this appliance correctly and safely.

**Ventilation Requirements**
The room containing the appliance should have an air supply in accordance with BS 5440:Part 2.

- All rooms require an openable window, or equivalent, and some will require a permanent vent as well.
- For room volumes up to 5m$^3$ an air vent of 100cm$^3$ is required.
- If the room has a door which opens directly to the outside, or exceeds 10m$^3$ - no air vent is required.
- For room volumes between 5m$^3$ and 10m$^3$ and air vent of 50cm$^2$ is required.
- If there are other fuel burning appliances in the same room, BS 5440:Part 2 should be consulted to determine the air vent requirements.
- This appliance must not be fitted into a bed sitting room of less than 20m$^3$ or into a bath or shower room.

Windows and vents should not be blocked or removed without first consulting a competent engineer.

**LPG only** - do not install this appliance below ground level. This does not preclude installation into rooms which are basements with respect to one side of the building, but

Where standards have been revised - always use the most recent edition.

**Failure to install appliances correctly is dangerous and could lead to prosecution.**
Installing Your Cooker

The information below is crucial to installing this appliance correctly and safely.

**UK Regulations & Standards**
always refer to the most recent issue of the standards

- Gas Safety Regulations.
- Building Regulations - issued by the DEFRA.
- Building Standards (Scotland) (Consolidated) - issued by the Scottish Development Department.
- I.E.E. Wiring Regulations.
- Electricity at Work Regulations.
- BS 6172 Installation of Domestic Gas Cooking. For **LP Gas**, refer to BS 5482 Part 1, Part 2 or Part 3 as relevant.
- Installation and Servicing Instructions for this appliance.

For installation in countries other than the UK, the appliance must be connected in accordance with all local gas and electrical regulations.

In the Republic of Ireland installers should refer to IS 813 Domestic Gas Appliances.

**Failure to install appliances correctly is dangerous and could lead to prosecution.**
Installing Your Cooker

Fitting the plinth (if applicable)

- Make sure the appliance is raised to a height of 915mm or above before beginning. If the appliance is below 915mm - you can only fit the plinth cover labelled Y. You can adjust the height using the feet (1) of the appliance.
- If your appliance has a storage drawer at the bottom, you access the required holes through the base of the drawer after lifting the mat.
- Open the appliance doors, and loosen screw A located on bracket (2). Do not remove this screw entirely.
- Insert screw B, through slot (3) and screw into the small hole at the bottom of bracket (2). Make sure that the plinth cover is flush to the appliance, but not over tightened.

Fitting the splashback (if applicable)

- Loosely fit screw A and nut B into hole 1 at both ends of the rear surface of the appliance.
- Locate fitted screw A through the slots in both of the metal splashback plates.
- Tighten screw A and nut B.
- Now locate and tighten screw C and nut D through hole (2) at both ends of the rear surface of the appliance. Make sure that the splashback is securely attached, but avoid over tightening.

Fitting the towel rail (if applicable)

- On the towel rail there are two hole, top (A) and bottom (B), these holes have corresponding holes on the fascia at each end.
- The screw for the top hole (A), must be screwed into the supplied adaptor, whereas the remaining screw just goes through the bottom hole (B). Both screws are M6 screws. Using the allen key provided, tighten the screws making sure that the towel rail is flush to the fascia,
Installing Your Cooker

Stabilising and Securing

Your cooker may come with a stability chain, if it does not we recommend that you buy a stability bracket from your local supplier, this will keep the cooker from moving and will prevent damage to the flexible hosing at the back of the cooker.

Your stability chain

Your cooker must be secured to a wall or a solid partition behind the cooker.

Your stability bracket

You can buy a stability bracket from your supplier and it can be fitted as follows:

- Place the cooker in position and draw a pencil line level with the front edge.
- Remove the cooker and mark off 450mm from the pencil line to locate the front edge of the lower bracket.
- Fix the bracket to the floor. Measure from floor level to engagement edge in the back of the cooker and add 3mm.
- Assemble the underside of the top part of the bracket to this height.
- See the drawings for the location of the bracket and the recommended positioning.

Levelling

Once your cooker is secure:

Place a spirit level onto a baking tray, on an oven shelf. These cookers are fitted with adjustable feet which will allow you to adjust the height of the appliance until it is level. The adjustable feet are at the rear of the cooker.
Connecting the electricity supply

Warning: This appliance must be earthed!

- This appliance must be fitted using a double pole unit of 30 ampere minimum capacity with 3mm minimum contact at all poles.

- Access to the mains terminal is gained by opening the terminal block cover at the rear of the appliance - use a flat bladed screw driver for this.

- Connection should be made with a 6.0mm² twin and earth cable.

- First strip the wires, then push the cable through the cable clamping the terminal block cover.

- Connect the cable to the terminal block and tighten the cable clamp screw - see diagram.

- Close the terminal box, ensuring that the cover is engaged on the locking tabs.

- Sufficient cable should be used to allow the cooker to be pulled out, but must hang clear of the floor so it does not become twisted or trapped when the cooker is pushed back.

Please ensure that the user has this copy of the handbook, and the appliance is in place. Thank you.
Connecting to the electricity supply

Warning - this appliance must be earthed.
The flexible mains lead is supplied connected to a BS 1363 fused plug.
If this plug does not fit in the socket in your home, it should be replaced by a suitable plug as outlined below.

As the colours of the wires in the mains lead of the appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is green and yellow must be connected to the terminal marked E (Earth) or coloured green.
The wire which is coloured blue must be connected to the terminal marked N (Neutral) or coloured black.
The wire which is coloured brown must be connected to the terminal marked L (Live) or coloured red.

The plug and socket must be accessible after installation.
Should the mains lead ever require replacing, we recommend that this is carried out by a qualified electrician who will replace it with a lead of the same size and temperature rating.
Important: ensure that you route all mains, electrical cables and flexible tubing well clear of any adjacent heat source.
Installing Your Cooker

Connecting to the gas supply
The inlet to the appliance is ISO 7 - Rp 1/2" internal thread situated towards the top right corner of the rear.
Fit the bayonet connection. This should be located so as to ensure that the flexible hose does not kink.
Use a 900mm - 1125mm length of flexible hose.
Ensure that all pipe work is of the correct rating.

Natural Gas - Flexible connections should comply with BS 669. Parts of the appliance likely to come into contact with a flexible connector have a temperature of less than 70°C.

LP Gas - For flexible connections use a bayonet type hose, suitable for use on LP Gas up to 50mbar pressure rise and 70°C temperature rise. The flexible hose should be coloured black with a red stripe, band or label. If in doubt, contact your supplier.

After installation make sure all connections are gas sound.

Commissioning

Pressure settings:
G20 Natural Gas @ 20mbar
G30 Butane @ 28-30mbar
G31 Propane @ 37mbar

Hob
Turn on gas supply and check for soundness at the hot-plate injector. Light two burners and check that the pressure is correct.
Technical Data - Notes

**Type of gas:**
- Natural Gas $\text{I}_2\text{H}$
- Natural Gas $\text{II}_2\text{H}_3^+\ast$
- LP Gas $\text{I}_3^+$

Please see data badge your for specified gas type. * Can be converted from Natural gas to LP Gas

*Never attempt to convert an appliance - unless the data badge states that you can.*

**Burner Aeration:**

Fixed

**Pressure setting:**
- G20 Natural Gas @ 20mbar
- G30 Butane @ 28-30mbar
- G31 Propane @ 37mbar

**Electrical supply:**

220 - 240V ~ 50Hz

Service Record

Please record your model number and serial number in the space below.

Where are my model and serial numbers?
Freestanding HL appliances: base of storage drawer
Freestanding appliances: front frame near oven cavity
Built in oven: front frame near oven cavity
Hobs: base plate of the hob

Having these numbers to hand will help us to help you, quickly and more efficiently. When contacting us, please use the Customer Care number on the back cover of this handbook.
