Waist Level

500 & 550mm wide
Freestanding Gas Cookers
For Natural Gas Models & LP Gas Models

User & Installation Instructions
The Gas Consumer Council (GCC) is an independent organisation which protects the interests of gas users. If you need advice, you will find the telephone number in your local telephone directory under Gas.

The appliance must be installed (and serviced) by a Corgi registered approved installer or a person competent to ensure that the installation is in accordance with “The Gas Safety (Installation and Use) Regulations 1994”, and the “The Gas Safety (Installation and Use) (Amendment) Regulations 1996”. Failure to comply with these Regulations is a criminal offence.

If you smell gas:

Do not try to light any appliance. Do not touch any electrical switch.

Call the Gas Emergency Helpline at TRANSCO on: **0800 111999**

In the Republic of Ireland, call the Bord Gais emergency line on **1850 205050** or contact your local gas supplier.
In case of difficulty within the UK and Northern Ireland, please call STOVES Customer Care Centre Helpline on 0151 432 7838

When you dial this number you will hear a recorded message and be given a number of options. This indicates that your call has been accepted and is being held in a queue. Calls are answered in strict rotation as our Customer Care Representatives become available.

Opening Hours for Customer Care Centre
  Monday to Friday 8am - 8pm
  Saturday 8.30am - 6pm
  Sunday 10am - 4pm

Enter appliance numbers here for future reference:

Please ensure you have the above details (Model No and Serial No) to hand when calling Stoves Customer Care. They are essential to booking your call.

Outside the UK and Northern Ireland, refer to your local supplier.

Please keep this handbook for future reference, or for anyone else who may use the appliance.
Thank you for choosing a British built appliance by Stoves

We hope that the following information will help you to familiarise yourself with the features of the appliance, and to use it successfully and safely.

Our policy is one of constant development & improvement. Strict accuracy of illustrations and specifications is not guaranteed. Modification to design and materials may be necessary subsequent to publication.

This appliance must be installed in accordance with the regulations in force, and only in a well ventilated space. Read the instructions before installing or using this appliance.

Your new appliance is designed to be installed flush to base units. Certain features, such as oven lights, are only available on some models.

Your 1st Year Guarantee

To fulfil the conditions of your guarantee, this appliance must be correctly installed and operated, in accordance with these instructions, and only be used for normal domestic purposes.

Please note that the guarantee, and Service availability, only apply to the UK and Republic of Ireland.

Ventilation

The use of a gas cooking appliance results in the production of heat and moisture in the room in which it is installed. Ensure that the kitchen is well ventilated: keep natural ventilation holes open or install a mechanical ventilation device (mechanical extractor hood). Prolonged intensive use of the appliance may call for additional ventilation, for example, opening of a window, or more effective ventilation, for example increasing the level of mechanical ventilation where present.

Moving the cooker

Do not attempt to move the cooker by pulling on the doors or handles. Open the door and grasp the frame of the cooker, taking care that the door does not shut on your fingers.

Take care to avoid damage to soft or uneven floor coverings when moving the appliance. Some cushioned vinyl floor coverings may not be designed to withstand sliding appliances without marking or damage.

Before using the appliance

For the first time, remove any protective polythene film and wash the oven shelves and furniture in hot soapy water, to remove their protective coating of oil. Even so, when you first turn on the oven or grill you may notice a smell and some smoke.
Glass door panels
To meet the relevant Standards of Domestic cooking appliances, all the glass panels on this appliance are toughened to meet the fragmentation requirements of BS3193. This ensures that, in the unlikely event that a panel breaks, it does so into small fragments to minimise the risk of injury.

Please take care when handling, using or cleaning all glass panels as any damage to the surfaces or edges may result in the glass breaking without warning or apparent cause at a later date. Should any glass panel be damaged, we strongly recommend that it is replaced immediately.

To replace a light bulb (if fitted)

Caution: Switch off the electricity supply to the cooker at the socket, to avoid the risk of electric shock.

Wait until the oven is cool, then remove the oven shelves. Grasp the lens cover on the light fitting and pull it away from the side of the oven. Unscrew the bulb.

Please note that the oven light bulb is not covered by the guarantee. Replacement bulbs can be ordered from your local supplier, or bought from a hardware store.

Stability bracket
If the cooker is to be fitted with a flexible inlet connection, a stability bracket should also be fitted to engage in the back of the cooker. Make sure this is re-engaged whenever you move the cooker for cleaning.

The cooling fan (if fitted - models with mains ignition only)
When the appliance is switched on, you may hear the cooling fan come on. This keeps the fascia and control knobs cool during grilling / cooking and will continue to operate for up to 15 minutes after the appliance has been switched off.

During oven use the fan may cycle on and off. Should any fault occur with the cooling fan, the appliance will require servicing. Contact Customer Support.

Gas & Electrical connection
Please refer to installation instructions for the Gas & Electrical Safety Regulations and the Ventilation Requirements.

In your own interest, and that of safety, it is the law that all gas appliances be installed by competent persons. Corgi registered installers undertake to work to satisfactory standards.

Disconnection of gas and electric appliances should always be carried out by competent persons.

Warning: This appliance must be earthed.
Battery ignition models

To fit battery

The battery is fitted to the top of the spark generator. The spark generator is located on the rear panel of the appliance.

If the ignition fails:

- Check there is a spark when the ignition switch is operated.
- Check that the gas supply is switched on.
- Check the battery and replace if necessary.

Mains ignition models

A plug is fitted with a 3 amp fuse.

If the ignition fails:

- Check there is a spark when the ignition button is depressed. If there is no spark, check that the electricity supply is switched on at the socket.
- Check that the gas supply is switched on.
- Try another appliance in the socket, if that works, replace the 3 amp fuse in the cooker plug.

Models without ignition

To ignite the burners

Use a lighted match or taper - refer to ignition instructions in the hob, grill and oven sections.

Environmental Protection

We are committed to protecting the environment and operate an Environmental Management System which complies with BS EN ISO 14001:1996.

Disposal of packaging

- All our packaging materials are recyclable and environmentally friendly.
- Please help us to protect our environment by disposing of all packaging in an environmentally friendly manner.
- Please contact your local authority for the nearest recycling centre.

Caution: Packaging materials can pose a risk of suffocation - keep away from children.
Installation Instructions

Connect to the gas supply

The inlet to the cooker is ½” BSP internal situated at the rear right corner. Fit the bayonet connection. This should be located so as to ensure the flexible connector hose does not kink.

Use a 900mm - 1125mm length of flexible connector.

Ensure that all pipe work is of the correct rating for both size and temperature.

Natural Gas - Flexible connections should comply with BS 669. Parts of the appliance likely to come into contact with a flexible connector have a temperature rise of less than 70˚C.

LP gas - For flexible connections use a bayonet type hose, suitable for use on LP gas up to 50 mbar pressure rise and 70˚C temperature rise. The flexible hose should be coloured black with a red stripe, band or label. If in doubt, contact your supplier.

After installation, make sure all connections are gas sound.

Commissioning

Burner aeration

All burners have fixed aeration and no adjustment is possible.

Pressure setting

G20 Natural Gas @ 20 mbar
G30 Butane @ 28-30 mbar
G31 Propane @ 37 mbar

Pressure test point

Use the oven injector

Grill - Turn the control knob to the FULL ON position, wait a second before pressing the ignition switch or holding a lighted match or taper to the burner. Allow the grill to run for a few minutes to ensure that the cooling fan operates.

Hob - Turn the control knob to the FULL ON position, wait a second before pressing the ignition switch or holding a lighted match or taper to the burner.

Oven - Open the oven door. Push in and turn the control knob to the full on position (gas mark 9). Hold the control knob in and operate the ignition button. A few seconds after the flame has established, the control knob can be released.

Before leaving the installation

1. Place all the loose parts of the cooker into position.
2. Show the customer how to operate the cooker and give them this handbook. Thank you.

When you are cooking, keep children away from the vicinity of the appliance.

This product is designed as a domestic cooking appliance for the preparation and cooking of domestic food products, and should not be used for any other purpose.

- Remove all packaging, protective films and oils from the appliance before using for the first time.
- Make sure you read and understand the instructions before using the appliance.
- Keep electrical leads short so they do not drape over the appliance or the edge of the worktop.
- Keep all flammable materials (such as curtains, furnishings & clothing) away from the appliance.
- Parts of the appliance may be hot during or immediately after use. Allow sufficient time for the appliance to cool after switching off.
- Never use the appliance for heating a room.
- Do not drape tea towels over the flue vents or doors, as this creates a fire hazard.
- When opening the appliance door, take care to avoid skin contact with any steam which may escape from the cooking.

Be Safe - Not Sorry

- Do not use aluminium foil to cover the grill pan, or put items wrapped in foil under the grill as this creates a fire hazard.
- Do not use the oven with the door inner glass panel removed (glass oven doors only).
- Use oven gloves when removing hot food / dishes from the oven or grill. The oven / grill and utensils will be very hot when in use.
- Do not use foil on oven shelves or allow it to block the oven flue, as this creates a fire hazard, and prevents heat circulation.
- Switch off the electricity supply before replacing the oven light bulb (if fitted), to avoid the risk of electric shock.
- When cooking heavy items - eg; turkeys - do not pull the oven shelf out with the item still on the shelf. Drop-down door models: Do not place items on the door when open.
- When you have finished cooking check that all controls are in the “off” position.

All installation, servicing and maintenance work should be carried out by a competent person who will comply with current Regulations, Standards and Requirements.

As with all gas appliances, it is recommended that your appliance is serviced regularly.
Using the Hob

Ignition
Push in and turn the selected control knob anticlockwise to the ‘full on’ position and press the ignition switch (if fitted), or hold a lighted match or taper to the burner, until the burner lights. Turn the control knob to the required setting. Adjust the burner flame so that it does not extend over the pan base.

Pans
For optimum safety and performance, we recommend the use of flat bottomed pans with a base diameter of minimum 100mm (4”) and maximum 250mm (10”). Do not use double pans, rim based pans, old misshapen pans or any pan which is unstable when placed on a flat surface.

To simmer
The simmer position is marked by the SMALL FLAME symbol. Once lit turn the selected control knob anticlockwise past the LARGE FLAME symbol (FULL ON) to the SMALL FLAME symbol.

Pan supports
Always make sure the pan supports are replaced correctly, and located in the hob spillage well.

To turn off, push in the control knob and turn clockwise until the dot on the control knob is below the dot on the facia panel.

Connect to the electricity supply (mains ignition models only)
Warning: This appliance must be earthed.

The flexible mains lead is supplied connected to a BS 1363 fused plug, having a fuse of 3 amp capacity.

The plug and socket must be accessible after installation. Should the mains lead of the appliance ever require replacing, we recommend that this is carried out by a qualified electrician who will replace it with a lead of the same size and temperature rating.

Important: - ensure that you route all mains and electrical cables and flexible tubing well clear of any adjacent heat source.

Installation Instructions

As the colours of the wires in the mains lead for the appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

1. The wire which is coloured green and yellow must be connected to the terminal marked E (Earth) or coloured Green.
2. The wire which is coloured blue must be connected to the terminal marked N (Neutral), or coloured Black.
3. The wire which is coloured brown must be connected to the terminal marked L (Live), or coloured Red.

The plug and socket must be accessible after installation.

Commercial simmering aids should not be used as they create excessive temperatures that can damage the surface and may cause a hazard.

Pan supports
Always make sure the pan supports are replaced correctly, and located in the hob spillage well.

E (Earth)
GREEN / YELLOW

N (Neutral)
BLUE

L (Live)
BROWN

Use a 3 amp fuse in a 13 amp plug.

The wires in the mains lead are coloured in accordance with the following code:

Green and yellow = Earth,
Blue = Neutral,
Brown = Live.
Installation Instructions

**Stability bracket**

If the cooker is fitted with a flexible connection, a stability bracket should be fitted to engage in the back of the cooker. A stability bracket can be bought from your local supplier.

A stability bracket can be fitted as follows:

1. Place the cooker in position and draw a PENCIL LINE level with the front edge.
2. Mark the centre of the cooker to give the CENTRE LINE for the bracket.
3. Remove the cooker and mark off 450mm from the PENCIL LINE to locate the front edge of the lower bracket.
4. Fix the bracket to the floor. Measure from FLOOR LEVEL to ENGAGEMENT EDGE in the back of the cooker and add 3mm.
5. Assemble the underside of the top part of the bracket to this height.

**Levelling**

Place a spirit level on a baking sheet onto an oven shelf. The cooker is fitted with levelling feet at the front and rear.

---

**Using the Grill**

**Caution:** Accessible parts may be hot when the grill is used. Young children should be kept away.

**Ignition**

Open the grill door. Push in and turn the grill control knob anticlockwise to the “full-on” position. Hold the control knob in and press the ignition switch (if fitted), or hold a lighted match or taper to the burner, until the burner lights.

**Natural Gas glass door models & Natural Gas models with no ignition**

Do not hold the control knob in for more than 15 seconds.

If after 15 seconds the burner has not lit, switch off the grill and leave the compartment door open. Wait at least one minute before a further attempt to ignite the burner.

**All metal door versions (NG & LPG) & all LP Gas versions**

A few seconds after the flame has established, the safety valve will open and the control knob can be released (this can take up to ½ minute).

In the event of the burner flames being accidentally extinguished, turn off the burner control and do not attempt to reignite the burner for at least one minute.

**Important:** Keep the grill door open when the grill is on.

When slower cooking is required the grill can be turned down anti-clockwise to a slightly reduced setting, past the large flame symbol (full on), to the small flame symbol. This can be used in conjunction with use of the different grilling positions (see below).

Only use the grill burner between the large and small flame symbol.

To turn off, push in the control knob and turn it clockwise to the “off” position.

**Detachable heatshield** (if fitted - battery ignition models and models without ignition)

Before using the grill, ensure that the detachable heatshield is in place.

**Caution:** The heatshield becomes very hot when the grill is used. Use oven gloves or allow to cool before removing the heatshield.

To fit the heatshield, hold it with both hands against the underside of the fascia panel, and lower (slightly) the edge you are holding to locate the heat-shield into the slot behind the fascia panel. Ensure that the right hand edge of the heatshield is level with the right hand side of the appliance, then push firmly home.
Using the Grill

Preheating
For best cooked results, always preheat the grill for about 3 minutes.

Aluminium foil
Using aluminium foil to cover the grill pan, or putting items wrapped in foil under the grill creates a fire hazard.

Using the grill
Push the grill pan towards the back of the shelf, to position it under the grill. Variation in grilling can be achieved by setting the grill between the large and small flame symbols. Important: Never operate the grill between the large flame and the off position.

The speed of grilling can also be controlled by selecting a higher or lower shelf position.

For toasting, and for grilling foods such as bacon, sausages or steaks, use a higher shelf position. For thicker foods such as chops or chicken joint pieces, use a middle to low shelf position.

When you have finished grilling, check that the control knob is returned to the off position.

Installation Instructions

Whilst every care is taken to eliminate burns and raw edges from this product, please take care when handling - we recommend the use of protective gloves during installation.

Moving the cooker
Please note that the weight of this appliance is approximately 41kg - 500mm models / 46 kg - 550mm models (unpacked).

Take care if the appliance needs to be lifted during installation - always use an appropriate method of lifting. Do not attempt to move the cooker by pulling on the doors or handles. Open the door and grasp the frame of the cooker, taking care that the door does not shut on your fingers.

Take care to avoid damage to soft or uneven floor coverings when moving the appliance. Some cushioned vinyl floor coverings may not be designed to withstand sliding appliances without marking or damage.

Clearances & dimensions

Appliance dimensions
All sizes are nominal, and some variation is to be expected. The 'depth' of the cooker, as given below, is to the front of the door and excluding knobs and handles.

<table>
<thead>

</tr>
</tbody>
</table>
Installation Instructions

Before you start: Please read the instructions. Planning your installation will save you time and effort.

Prior to installation, ensure that the local distribution conditions (nature of the gas and gas pressure) and the adjustment of the appliance are compatible. The adjustment conditions are stated on the data badge.

This appliance is not connected to a combustion evacuation device. It shall be installed and connected in accordance with current installation regulation. Particular attention shall be given to the relevant requirements regarding ventilation.

In your own interest and that of safety, it is the law that all gas appliances be installed and serviced by competent persons. CORGI registered installers undertake to work to satisfactory standards.

Where regulations or standards have been revised since this handbook was printed, always use the latest edition.

In the UK the regulations and standards are as follows:

2. Building Regulations - Issued by the Department of the Environment.
3. Building Standards (Scotland) (Consolidated) - Issued by the Scottish Development Department.
4. The current I.E.E. Wiring Regulations.
5. Electricity at Work Regulations 1989.
6. BS 6172 Installation of Domestic Gas cooking Appliances.

Also, for LP Gas, refer to BS 5482 Part 1, Part 2 or part 3 as relevant.
7. Installation & Servicing Instructions for this appliance.

For installation in countries other than the UK, the appliance must be connected in accordance with all local gas and electrical regulations. In the Republic of Ireland, Installers should refer to IS813 Domestic Gas Appliances.

Ventilation Requirements

The room containing the appliance should have an air supply in accordance with BS 5440: Part 2: 1989:

- All rooms require an openable window, or equivalent, and some rooms will require a permanent vent as well.
- For room volumes up to 5m³ an air vent of 100cm² is required.
- If the room has a door that opens directly to the outside, or the room exceeds 10m³, NO AIR VENT is required.
- For room volumes between 5m³ and 10m³ an air vent of 50cm² is required.
- If there are other fuel burning appliances in the same room, BS 5440: Part 2: 1989 should be consulted to determine the air vent requirements.
- This appliance must not be installed in a bed sitting room of less than 20m².

Windows and permanent vents should therefore not be blocked or removed without first consulting a CORGI gas installer.

LP Gas only - Do not install this appliance in a room below ground level. This does not preclude installation into rooms which are basements with respect to one side of the building, but open to ground level on the opposite side.

In the Republic of Ireland, refer to relevant Irish Standards for correct ventilation requirements.

Failure to install appliances correctly is dangerous and could lead to prosecution.

Caution: Accessible parts may be hot when the appliance is in use, young children should be kept away.

Ignition

Open the oven door. Push in and turn the oven control knob to the full on position (gas mark 9).

Hold the control knob in and press the ignition switch (if fitted), or hold a lighted match or taper to the burner, until the burner lights.

Glass door models & models with no ignition

Do not hold the control knob in for more than 15 seconds.

If after 15 seconds the burner has not lit, switch off the oven and leave the compartment door open. Wait at least one minute before a further attempt to ignite the burner.

Metal door & LPG models (& some glass door versions)

A few seconds after the flame has established, the safety valve will open and the control knob can be released (this can take up to ½ minute).

Turn the control knob to the required gas mark setting.

To turn off push in the control knob and turn to the “off” position.

In the event of the burner flames being accidentally extinguished, turn off the burner control and do not attempt to re-ignite the burner for at least one minute.

Preheating

The oven must be preheated for 15 - 20 minutes when cooking frozen or chilled foods, and we recommend pre-heating for yeast mixtures, batters, soufflés, whisked sponges and pastry.

If you are not preheating the oven, the cooking times in the following guides may need to be extended, as they are based on a preheated oven.

Zones of heat

The temperature at the centre of the oven corresponds with the selected gas mark and is slightly higher towards the top of the oven and slightly lower towards the oven base.

These zones of heat can be useful as different dishes requiring different temperatures can be cooked at the same time, when more than one shelf is used.

The temperature at the oven base is suitable for cooking baked vegetables, baked fruit, milk pudding etc, and for warming bread rolls, soup, coffee, or ovenproof plates and dishes.

If you find that over a period of time, the oven becomes hotter when used at a particular gas mark, the thermostat may need to be replaced.

Using the Oven
Notes:
As part of the cooking process, hot air is expelled through a vent at the top of the oven(s). When opening the oven door, care should be taken to avoid any possible contact with potentially hot air, since this may cause discomfort to people with sensitive skin. We recommend that you hold the underneath of the oven door handle.

Baking tray and roasting tins
For best cooked results and even browning, the maximum size baking trays and roasting tins that should be used are as follows:

500mm wide models:
- Baking tray 290mm x 270mm
  This size of baking tray will hold up to 16 small cakes.
- Roasting tin 320mm x 270mm

550mm wide models:
- Baking tray 350mm x 280mm
  This size of baking tray will hold up to 16 small cakes.
- Roasting tin 370mm x 320mm

We recommend that you use good quality cookware. Poor quality trays and tins may warp when heated, leading to uneven baking results.

Oven light (if fitted)
The oven light is operated by the oven light switch, located on the facia.

Shelf positions
The oven shelf must be positioned with the upstand at the rear of the oven and facing upwards.

Position baking trays and roasting tins on the middle of the shelves, and leave 1 clear shelf position between shelves, to allow for circulation of heat.

When cooking 2 trays or items, remove the top item when it is cooked and raise the lower item to the higher shelf to finish cooking, or where additional browning of the bases is required - eg; pies and pastries, interchange part way through cooking.

If you prefer darker cooked results, cook on a higher shelf, for paler results use a lower shelf.

Slow cooking
Make sure that frozen foods are thoroughly thawed before cooking.

Do not slow cook joints of meat or poultry weighing more than 2½kg / 4½lb.

Always use the top half of the oven for slow cooking.

For roasting joints of meat or poultry, and for pot roasts preheat the oven to gas mark 6 and cook for 30 minutes, then adjust the oven control to the 'S' slow setting for the remainder of the cooking time.

Slow cooking times will be about three times as long as conventional cooking times.

Easy care oven interior (if fitted)
OVEN SIDES AND BACK
We recommend that the appliance is cleaned after open roasting, and also after roasting at temperatures higher than gas mark 5, to help prevent a build up of fats. Use of a trivet in a roasting tin when roasting will help reduce fat splashing.

Caution: Most types of cleaning agent will damage these surfaces. Only use a few drops of washing up liquid in hot water. Wipe the surfaces with a clean cloth wrung out in hot soapy water. If larger splashes of fat do not readily disappear scrub the area with a nylon brush or nylon pan scourer and hot soapy water. Rinse well and heat the oven to dry the surfaces.

Cleaning
Glass parts (if fitted)
GLASS DOOR PANELS
Do not use abrasives or polishes as they will scratch and damage the glass.

Use a mild cream cleaner - eg; "Cif". Rinse away excess cleaner and dry with a soft cloth.

Warning: Do not operate the appliance without the glass panel correctly fitted.

Important: the inner door glass panel can be removed for cleaning but it must be replaced the right way up (so the reflective side - if fitted - faces inwards), and pushed fully in to the stop position. To remove the glass panel, open the door wide, hold the top and bottom edges and slide out.

Chrome plated parts
OVEN SHELF & SHELF RUNNERS, GRILL PAN RUNNERS, GRILL PAN TRIVET

Use a moist soap pad - eg; "Brillo".

Note: Oven shelf runners (if fitted) can be removed for cleaning. Grasp the runners and slide out of the hanging holes as shown.

Note: These items may also be cleaned in a dishwasher.
Caution: Any cleaning agent used incorrectly may damage the appliance. 
Always let the cooker cool before cleaning.

Some cooking operations generate considerable amount of grease, this combined with spillage can become a hazard if allowed to accumulate on the cooker through lack of cleaning. In extreme cases this may amount to misuse of the appliance and could invalidate your guarantee.

It is recommended that the appliance is cleaned after open roasting.

Do not use caustic, corrosive or abrasive cleaning products, products containing bleach, coarse wire wool or any hard implements, as they will damage the surfaces.

Important: The burner caps and heads must be repositioned correctly so that they sit squarely onto the hob as shown.

Painted, plastic and metal finish parts (if fitted)

METAL DOOR PANEL (if fitted), OVEN DOOR FRAME & HANDLE, GRILL PAN HANDLE, FACIA PANEL & CONTROL KNOBS

Only use a clean cloth wrung out in hot soapy water.

Note: The cooking times given above are based on cooking in a pre-heated oven.
Please note that the times and temperatures stated are only intended for reference only - refer to your recipe.
Traditional fruit cakes

It should be remembered that ovens can vary over time, therefore cooking times can vary, making it difficult to be precise when baking fruit cakes.

It is necessary therefore, to test the cake before removal from the oven. Use a fine warmed skewer inserted into the centre of the cake. If the skewer comes out clean, then the cake is cooked.

Do not attempt to make Christmas cakes larger than the oven can cope with, you should allow at least 25mm (1 inch) space between the oven walls and the tin.

Always follow the temperatures recommended in the recipe.

To protect a very rich fruit cake during cooking, tie 2 layers of brown paper around the tin.

We recommend that the cake tin is not stood on layers of brown paper, as this can hinder effective circulation of air.

Do not use soft tub margarine for rich fruit cakes, unless specified in the recipe.

Always use the correct size and shape of tin for the recipe quantities.

Roasting turkey

Roasting turkey involves cooking two different types of meat - the delicate light breast meat, which must not be allowed to dry out, and the darker leg meat, which takes longer to cook.

The turkey must be roasted long enough for the legs to cook, so frequent basting is necessary. The breast meat can be covered once browned.

Always make sure that the turkey is completely thawed and that the giblets are removed before cooking.

Turkey should be roasted at gas mark 4 for 20 minutes per 1 lb, plus 20 minutes, unless packaging advises otherwise.

The turkey can be open roasted, breast side down, for half of the cook time, and then turned over for the remainder of the cooking time.

If the turkey is stuffed, add 5 minutes per 1 lb to the cooking time.

If roasting turkey covered with foil, add 5 minutes per 1 lb to the cooking time.

To test if the turkey is cooked, push a fine skewer into the thickest part of the thigh. If the juices run clear, the turkey is cooked. If the juices are still pink, the turkey will need longer cooking.

Roasting guide

The times given in the roasting guide are only approximate, because the size and age of the bird will influence cooking times as will the shape of a joint and the proportion of bone.

Frozen meat should be thoroughly thawed before cooking. For large joints it is advisable to thaw overnight.

Frozen poultry should be thoroughly thawed before cooking. The time required depends on the size of the bird - eg; a large turkey may take up to 48 hours to thaw.

Use of a trivet with a roasting tin will reduce fat splashing and will help to keep the oven interior clean. Alternatively, to help reduce fat splashing, potatoes or other vegetables can be roasted around the meat / poultry.

Using the Oven

Cook in oven at Gas Mark 5

<table>
<thead>

<td>Poultry</td>
<td>20 minutes per 450g (1 lb), plus 20 minutes</td>
</tr>
</tbody>
</table>

Notes:

- When cooking stuffed meat or poultry, calculate the cooking time from the total weight of the meat plus the stuffing.
- For joints cooked in foil or covered roasters, and for lidded casseroles, add 5 minutes per 450g (1 lb) to the calculated cooking time.
- Smaller joints weighing less than 1.25kg (2½ lb) may require 5 minutes per 450g (1 lb) extra cooking time.
- Position the oven shelf so that the meat or poultry will be in the centre of the oven.
- It is recommended that the appliance is cleaned after open roasting.
